I haven't had much opportunity to throw or project
an object. I am not really sure how to organize my
body yet. I am still working out how best to set
myself up to do it. I am throwing/projecting from a
distance I choose to a target that suits me. I try a
range of ways to project an object. For now, I like
the challenge of trying to hit a target. I'll get better
at this with some time to practice.

I haven't had much opportunity to throw or project an object. I am not really sure how to organize my body yet. I am still working out how best to set myself up to do it. I am throwing/projecting from a distance I choose to a target that suits me. I try a range of ways to project an object. For now, I like the challenge of trying to hit a target. I'll get better at this with some time to practice. I can work on: • Focusing on the target. • Different ways to project/throw: Try rolling, slinging, front on, side on. • Noting what gives you the most power? • Noting what gives you the most power? • Noting what gives you the most accuracy? Focus for practice • Have fun with projecting/throwing things. Try some games, keep up the practice toget the idea of the skill. It won't take long • Seeking help & listening to feedback • Watching what others do This best describes where I am at: 	My movements are a little stiff and chunky when trying to throw. I am getting used to standing side on and stepping forward but I try to limit the number of body parts I use at any one time. I like to get settled a bit before I throw. I sometimes hit the target from cone 1 or 2, but not very hard yet. I need a little more time to practice. I can work on: • Getting side on • Taking a step/movement towards the target • Getting into the 'Giants Position' • Building more force even if I miss the target Focus for practice • Have fun with throwing games, focus on repetition and practice to get used to throwing. • Seeking help & listening to feedback • Watching a video of my throw This best describes where I am at: Date:	My movements are becoming more fluid. I find it easier to use more body parts together. I generally throw from a stationary, side-on and stable base and build energy through my body. I hit the target more than I miss from cone 2 or 3 with moderate force. I can work on: • Moving to the ball then getting into position to throw • Transferring my weight • Building more force through my legs and hips. • Accuracy of my throw while maintaining force Focus for practice • Combine repetition and small sided game practice, simulations. • Seeking help & listening to feedback • Watching what others do • Watching a video of my throw This best describes where I am at: Date:	My movements are fluid and free. I don't have to think about what I am doing. I can transition from a running towards the ball to throwing quickly from a strong base. I build energy from my feet to my fingers like a whip cracking. I still miss the target occasionally from cones 3 and 4, but I mostly throw with good force and accuracy. I can work on: • Moving to the ball then getting into position to throw • Transferring my weight • Building more force through my legs and hips • Accuracy of my throw while maintaining force or increasing distance Focus for practice • Try refining your skill in the context of game practice or simulations • Seeking help & listening to feedback • Watching a video of my throw This best describes where I am at: Date: Initial: Checked by (initial):	I never really throw the same way twice, it depends on the game or activity. I can throw from different body positions and am accurate over a variety of distances. I can adjust the speed of the throw to suit the context of the game. When I look at my video, my action is similar to other athletes. I am ready to extend myself and my throwing by working on improving my: • Attack on the ball • Time to release • Speed of the throw • Distance of the throw • Applying my technique to other movements like serving, spliking, javelin • Helping others to improve their throw • Describing the science behind good throwing techniques (biomechanics) Document in your journal, how you plan to enact this and measure your improvement? This best describes where I am at: Date: Initial: Checked by (initial):
