

Published in International Journal of Behavioural Nutrition and Physical Activity (DOI 10.1186/s12966-018-0696-y)

Mixed methods systematic review

21 studies included with highly varied results

Results

Social media is seen as an acceptable health information source

Engagement with the social media component varied from 3-69%

Young adults
responded well to
health information and
recipe tips via social
media

Young adults are reluctant to share personal weight-related information

Providing social support via social media could benefit behaviour change in young adults

Research should consider how to engage and support young adults using social media, and to facilitate social and peer-to-peer support in making healthier choices.
